CHAMPS Data Highlights Causes of Newborn and Child Deaths in South Asia and Sub-Saharan Africa

For the first time, public health officials and researchers around the globe will have access to accurate and timely data about the causes of death in children under age five in South Asia and sub-Saharan Africa. The data release is part of an ambitious and comprehensive initiative called the Child Health and Mortality Prevention Surveillance (CHAMPS) Network that is supported by a coalition of partners including The Task Force for Global Health. Ambitious Roadmap Outlines How Countries Can Better Respond to Disease Outbreaks

The Task Force for Global Health and its global partners have crafted a far-reaching, seven-step action framework to modernize, strengthen, and expand global Field Epidemiology Training Programs (FETPs). More

Digital Bridge Breaks New Ground in 2019, Launches in Two Sites

Houston and Utah are the first locations to implement an approach that allows health care providers to automatically send information about reportable diseases to public health agencies using a new and innovative electronic method. More

A Leprosy Advocate, Who Was Once a Patient, Talks About Stigma, Empowerment, and Treatment

In 2010, Mathias Duck was working at a hospital in his native Paraguay when he began to feel tingling in two fingers of his right hand. More

DONATE
Vivian Singletary, MBA, JM, who heads the Public Health Informatics Institute (PHII) at The Task Force, wrote a piece in the Atlanta Business Chronicle about the rising need for digital health surveillance and PHII's role in helping make that happen.

Creating a world free of debilitating diseases.
