Walter Orenstein  
William Nichols

Large health challenges like stopping the spread of intestinal worms or implementing an information system throughout a country's entire health system can not be achieved by one person, organization, or even one government alone. It takes a collaborative effort.

If you would like to be apart of this effort to eliminate diseases and protect the health of populations, please visit [taskforce.org/donate](https://taskforce.org/donate) and/or follow us on social media and share our story with your friends and families.
